

The Regional Clinical Cardiology Dispensary is the only cardiology dispensary in the Stavropol Territory and is a large medical, consultative and diagnostic institution of the cardiology service of the Stavropol Territory and the North Caucasus Federal District. In the framework of regional project "combating cardiovascular diseases" on the cardio with a role in the steering of organizational and methodological center, - organizing and coordinating the implementation of project activities to achieve the targets for reduction in mortality and lethality from circulatory diseases in the region, increasing the life expectancy of the people.

The clinic is headed by the chief physician, cardiologist of the highest qualification category, Candidate of Medical Sciences – Irina Viktorovna Terentyeva.

Currently, the capacity of the cardiology dispensary is 144 beds, including 25 cardiac surgery, 94 cardiology, 9 intensive care and 16 beds in the cardiology day hospital. The

consultative and polyclinic department is designed for 170 visits per day. Diagnostic assistance is provided for functional, ultrasound diagnostics, radiation and laboratory diagnostics. The Department of Gravitational Blood Surgery and Hyperbaric Oxygenation uses hemocorrection, efferent therapy, quantum hemotherapy and HBO in the treatment of patients.

The cardiodispenser employs more than 280 employees, including 66 doctors and 91 secondary health workers. The team of doctors includes 28 cardiologists, 3 cardiovascular surgeons, 3 doctors for X-ray endovascular diagnostics and treatment, 10 anesthesiologists-resuscitators.

6 employees are candidates of medical sciences, 1-Doctor of Medical Sciences, 2-Honored doctors of the Russian Federation and 19 excellent health workers.

GBUZ SK "KKKD" is the clinical base of the departments of Stavropol State Medical University and Medical College, which allows employees of the institution to improve their knowledge by interacting with leading Russian and foreign medical clinics.

Every year, more than 4,500 patients are treated in the hospitals of the cardiology dispensary, more than 1,300 diagnostic coronary angiography and 1,300 heart operations are performed, including for cardiac arrhythmias: EX – 630 implants, radiofrequency ablations-90 and 550 angioplasty of the coronary arteries with the installation of one, two and three stents. More than 3,500 programs of all types of ecs implanted in the dispensary and in federal clinics are performed for residents of not only our region, but also the entire North Caucasus Federal District,

since our institution is the only one in the district that performs this research at the outpatient stage.

Over the past 3 years, such surgical interventions as cryoisolation of the left atrial pulmonary vein mouths for atrial fibrillation using second-generation balloons, stenting of coronary arteries with 1-3 stents, coronary thrombectomy, radiofrequency ablation of atrial fibrillation using endocardial echocardiography, implantation of an EX with the installation of an electrode in the area of the Gis beam have been mastered and put into practice in the GBUZ SK "KKKD".

Today, the level of competence of medical personnel, world-class equipment, advanced technologies together ensure a continuous high-quality medical and diagnostic process, round-the-clock work of a well-coordinated team of specialists.

In the midst of the pandemic, the cardiology clinic continues to provide planned and emergency care to the population in full. The new threat required new organizational solutions. All modern means of communication and telemedicine are used to accompany patients.
